systems

possible

Adjusting program (CAL) For quick setting of the

instrument's accuracy. External adjusting weight required

Calibration block

Standard for adjusting or correcting the measuring

Peak hold function

Capturing a peak value within a measuring process

Scan mode

Continuous capture and display of measurements

Push and Pull

The measuring device can capture tension and compression forces

Length measurement

Captures the geometric dimensions of a test object or the movement during a test process

Focus function

Increases the measuring accuracy of a device within a defined measuring range

Internal memory

To save measurements in the device memory

Data interface RS-232

Bidirectional, for connection of printer and PC

Profibus

For transmitting data, e.g. between scales, measuring cells, controllers and peripheral devices over long distances. Suitable for safe, fast, fault-tolerant data transmission. Less susceptible to magnetic interference

Profinet

Enables efficient data exchange between de-centralised peripheral devices (balances, measuring cells, measuring instruments etc.) and a control unit (controller). Especially advantageous when exchanging complex measured values, device, diagnostic and process information. Savings potential through shorter commissioning times and device integration possible

Data interface USB

To connect the measuring instrument to a printer, PC or other peripheral devices

Bluetooth* data interface

To transfer data from the balance/measuring instrument to a printer, PC or other peripherals

WIFI data interface

To transfer data from the balance/measuring instrument to a printer, PC or other peripherals

Data interface infrared

To transfer data from the measuring instrument to a printer, PC or other peripheral devices

Control outputs (optocoupler, digital I/O) To connect relays, signal

lamps, valves, etc.

Analogue interface

To connect a suitable peripheral device for analogue processing of the measurements

Analogue output

For output of an electrical signal depending on the load (e.g. voltage 0 V - 10 V or current 4 mA - 20 mA)

Statistics

Using the saved values, the device calculates statistical data, such as average value, standard deviation etc.

PC Software

To transfer the measurement data from the device to a PC

Printer

A printer can be connected to the device to print out the measurement data

Network interface

For connecting the scale/ measuring instrument to an Ethernet network

KERN Communication Protocol (KCP)

It is a standardized interface command set for KERN balances and other instruments, which allows retrieving and controlling all relevant parameters and functions of the device. KERN devices featuring KCP are thus easily integrated with computers, industrial controllers and other digital systems

GLP/ISO record keeping

of measurement data with date, time and serial number. Only with SAUTER printers

Measuring units

Weighing units can be switched to e.g. non-metric. Please refer to website for more details
